

Alireza Safaei

Web Systems Engineer | Production Delivery, Technical SEO, Local-First Infrastructure

Email: alirezasafaeisystems@gmail.com Phone: +98 900 016 0203 Portfolio: alirezasafaeisystems.ir GitHub: github.com/alirezasafaei-dev
Telegram: t.me/asdevsystems

PROFILE

I build production-ready web systems from architecture to deployment, with emphasis on resilient delivery in constrained environments. My work combines Next.js and TypeScript product engineering, technical SEO, VPS hardening, release operations, and local-first infrastructure decisions that reduce fragility and improve trust.

SELECTED PRODUCT AND DELIVERY WORK

alirezasafaeisystems

Live portfolio and conversion system

Next.js, TypeScript, Prisma, VPS deployment, analytics, security headers

- Built a bilingual portfolio platform designed as a visitor-to-lead conversion system instead of a static showcase.
- Implemented production-grade QA, deployment flow, readiness checks, and governance docs for safer releases.
- Connected live proof across portfolio, audit platform, and utility products with measurable cross-site routing.

Audit Systems

Technical SEO and site audit platform

Next.js, TypeScript, reporting workflows, SEO diagnostics

- Positioned a practical audit product for performance, security, and technical SEO with actionable outputs.
- Used the platform as both a service entry point and reusable engineering proof for client trust.

PersianToolbox

Local-first utility product

Next.js, TypeScript, product UX, production maintenance

- Delivered a Persian-first public utility product focused on low friction, privacy, and constrained-environment practicality.
- Used it as live evidence of end-to-end product execution, release discipline, and UX quality.

Client and systems execution

Freelance and independent delivery

Architecture, debugging, production rescue, Nginx, PM2, VPS

- Work across incomplete products, infrastructure localization, release stabilization, and production hardening.
- Translate messy technical and business constraints into an executable delivery path with clear tradeoffs.

CORE CAPABILITIES

- Next.js and TypeScript product engineering
- Software architecture and system design
- Technical SEO, performance, and audit workflows
- VPS, Nginx, PM2, and release stabilization
- Local-first and sanctions-resilient delivery
- Debugging, rescue, and production hardening

STACK

Next.js TypeScript Node.js React
 Prisma PostgreSQL Nginx PM2
 Linux VPS GitHub Actions Playwright
 SEO QA

FOCUS AREAS

- Landing pages and service websites that must convert
- Internal tools and dashboards with production needs
- Audit and reporting systems
- Local infrastructure alternatives under platform constraints
